# Pfizer knew their vaccine would kill

Leaked data shows shocking number of fatalities and side effects now officially associated with covid shots

By Janine Griffiths

**THE documents were leaked due to a cyber attack on the European Medicines Agency (EMA) website. More than 40 megabytes of classed Information from the agency's review were published on the dark web, and several Journalists including the BMJ were sent copies of the leak by anonymous senders.**

The documents have proved to be shocking due to the sheer amount of side effects that are now officially associated with the "vaccine". Most alarmingly, there were at least 1,223 deaths reported in the first 28 days following the shot.

The US. Food and Drug Administration (FDA) had previously agreed to withhold the documents and their shocking revelations from the public for 75 years.

The HSE, media and the government continually state that the vaccines are 'safe and effective' and those that has reported vaccine-related injuries were often accused of making false correlations or imagining their symptoms.

However, the Pfizer documents paint a very different picture. They list thousands of side effects that occurred at an alarming rate which were as a direct result of taking the experimental genetic injection.

These side effects included non-fatal conditions such as eczema, blisters, asthma, low sperm counts and fertility problems.

Other more serious side effects included, but were not limited to: auto-immune disorders; blindness; diabetes; herpes; heart problems such as myocarditis; thyroid disorders; neurological conditions such as multiple sclerosis; seizures; epilepsy; narcolepsy and Guillain-Barre Syndrome. Also, inflammatory bowel disease, relapsing diseases, deafness and even tongue biting.

While it has been approved for use in pregnant women, it is also known to cause pregnancy complications, including many spontaneous abortions.

One of the many issues it causes is anaphylactoid syndrome of pregnancy

or ASP for short. ASP is a fatal disease for mothers and is among the leading causes of maternal mortality.

Symptoms include anxiety, confusion, shortness of breath, severe bleeding and death. Therefore, there is a high risk for pregnant women taking the covid 'vaccine'.

The Pfizer document also lists various blood disorders, Crohn's disease, and liver failure as side-effects. Blood clotting was another issue reported from the 'vaccine' trials.

One of the most telling side effects of this covid-19 injection is... covid19. Proponents often argue that despite the possible side effects associated with some of the covid shots, they at least prevent people from dying from covid -19.

The problems is that the 'vaccine' actually causes people to develop the disease. In other words, it is contributing to the number of cases. It also lists covid-19 associated with the Pfizer shot.

However, death and serious injuries have been present and publicly acknowledged with all of the manufacturer's shots.

Research developed by Edinburgh University showed at least 350 Brits have been struck down with a separate rare clotting disorder after getting the AstraZeneca vaccine.

These blood clots cause minor bruising around the body and can leave some with a purple-dotted rash.

The Moderna vaccine has been associated with heart problems such as myocarditis and pericarditis. The list of adverse reactions also includes inflammation, fainting and breathing difficulties.

Data from the UK Health Security Agency (UKHSA) listed on page 2 has also revealed that both covid-19 deaths and cases were worse in vaccinated people, particularly those over the age of 18.

The data in the table is clear: the chances of developing covid-19 increases significantly following subsequent 'booster' jabs.

This is broadly in line with the information contained in the Pfizer document, which stated that vaccine side effects cause covid-19 and respiratory illnesses.

Coupled with the fact that ONS data recently revealed that covid deaths were much lower than previously thought, the risks of taking the vaccine seem to greatly outweigh the risks of not doing so.
