# Information on Status of Nuclear Power Plants in Fukushima

Japan Atomic Industrial Forum, Inc.

Policy on information and compilation

This JAIF-compiled information chart represents the situation, phenomena, and operations in which JAIF estimates and guesses the reactors and related facilities are, based on the latest data and information directly and indirectly made available by the relevant organizations when JAIF's updating works done. Consequently, JAIF may make necessary changes to descriptions in the chart, once (1) new developments have occurred in the status of reactors and facilities and (2) JAIF has judged so needed after reexamining the prior information and judgments.

JAIF will do its best to keep tracks on the information on the nuclear power plants quickly and accurately.

# Status of nuclear power plants in Fukushima as of 12:00, May 12th (Estimated by JAIF)

D. OLL			E L. altino Data Lin Danie Chat				
Power Station	1	2	Fukushima Dai-ichi Nuclear Power Stati	on	- 1		
Unit Carlos (AMA)	100 / 1000	2	3	4	5	6	
Electric / Thermal Power output (MW)	460 / 1380	784 / 2381	784 / 2381	784 / 2381	784 / 2381	1100 /3293	
Type of Reactor	BWR-3	BWR-4	BWR-4	BWR-4	BWR-4	BWR-5	
Operation Status at the earthquake occurred	In Service → Shutdown	In Service → Shutdown	In Service → Shutdown	Outage	Outage	Outage	
Fuel assemblies loaded in Core	400	548	548	No fuel rods	548	764	
Core and Fuel Integrity (Loaded fuel assemblies)	Damaged (55%*1)	Damaged (35%*1)	Damaged (30%*1)	No fuel rods	Not Dar	maged	
Reactor Pressure Vessel structural integrity				Not Damaged	Not Dar	maged	
Containment Vessel structural integrity	Not Damaged (estimation)	Damage and Leakage Suspected	Not damaged (estimation)	Not Damaged	Not Dar		
Core cooling requiring AC power 1						3	
(Large volumetric freshwater injection)	Not Functional	Not Functional	Not Functional	Not necessary	Funct		
Core cooling requiring AC power 2 (Cooling through Heat Exchangers)	Not Functional Not Functional Not Functional Not Functional Not necessary		Functioning (in cold shutdown)				
Building Integrity	Severely Damaged (Hydrogen Explosion)	Slightly Damaged	Severely Damaged (Hydrogen Explosion)	Severely Damaged (Hydrogen Explosion)	Open a vent hole on the rooftop for avoiding hydrogen explosion		
Water Level of the Rector Pressure Vessel	Fuel exposed partially or fully	Fuel exposed partially or fully	Fuel exposed partially or fully	Safe	Sat	fe	
Pressure / Temperature of the Reactor Pressure	Gradually increasing / Decreased a little						
Vessel	after increasing over 400°C on Mar. 24th	Unknown / Stable	Unknown / Gradually increasing	Safe	Sat	fe	
Containment Vessel Pressure	Decreased a little after increasing up to 0.4Mpa on Mar. 24th	Stable	Stable	Safe	Sat	fe	
Water injection to core (Accident Management)	Continuing (Switch from seawater to freshwater)	Continuing (Switch from seawater to freshwater)	Continuing (Switch from seawater to freshwater)	Not necessary	Not nec	essary	
Water injection to Containment Vessel (AM)	Feed water to fill up the CV (started 4/27)	Feed water to fill up the CV (planned)	Feed water to fill up the CV (planned)	Not necessary	Not nec	essary	
Containment Venting (AM)	Temporally stopped	Temporally stopped	Temporally stopped	Not necessary	Not nec		
Fuel assemblies stored in Spent Fuel Pool	292	587	514	1331	946	876	
Fuel Integrity in the spent fuel pool	Unknown	Unknown	Damage Suspected	some of the spent fuel may have been damaged*3	Not Dar		
del integrity in the spent ruel pool	OTIKTIOWIT	OTIKTIOWIT	Daillage Suspected	· · · · · · · · · · · · · · · · · · ·	NOC Dai	Illageu	
Cooling of the spent fuel pool	Water spray continues (freshwater)  Water injection continues (Switch from seawater to freshwater)  Water spray and injection continues (Switch from seawater to freshwater)  Water spray and injection continues (Switch from seawater to freshwater)  Water spray and injection continues (Switch from seawater to freshwater)  Water spray and injection continues (Switch from seawater to freshwater)  Pool cooling (Switch from seawater to freshwater)				Pool cooling capabil	lity was recovered	
Main Control Room Habitability & Operability	Poor due to loss of AC power (	lighting and parmaeter monitoring restore	d in the control room at Unit 1 and 3 on Mar. 24th, a	t Unit 2 on Mar. 26th, at Unit 4 on Mar. 29th)	Not damaged	l (estimate)	
Environmental effect	Radioactive materials continues to be detected in samples corrected from underground water and sea water at or near the site. Environmental monitoring has been enhanced.  Radioactive Iodine and cesium have been detected in the seabed samples taken 15–20 km far from the plant from 15–20m deep. Level of radiation is 100 to 1,000 times above normal. (5/4)  Influence to the people's life Radioactive material was detected from milk, agricultural products and seafood from Fukushima and neighboring prefectures. The government issued order to limit shipment and intake of some products.  Radioactive iodine, exceeding the provisional legal limit for drinking water, was detected from tap water sampled in some prefectures. All the restrictions of intake of the water have been lifted by May 10th.  Radioactive cesium was detected in the sludge from a sewage treatment plant 50 km far from the power station.

Government Nuclear Emergency Response Headquarters: News Release (-<u>5/11 17:00</u>), Press conference NISA: News Release (-<u>5/11 12:00</u>), Press conference TEPCO: Press Release (-<u>5/12 09:00</u>), Press Conference

[Abbreviations]
MEXT: Ministry of Education, Culture, Sports, Science and Technology
INES: International Nuclear Event Scale
NISA: Nuclear and Industrial Safety Agency
TEPCO: Tokyo Electric Power Company, Inc.
NSC: Nuclear Safety Commission of Japan

- \*1 TEPCO's estimation revised on April 27
- \*2 Correction: Rating was raised from 5 to 7 for the accident of Unit 1 through 3
- \*3 It is presumed that some of the spent fuel may have been damaged based on radioactive substance detected from the water sample taken from the pool of Unit 4.

Low High

Severe (Need immediate action)

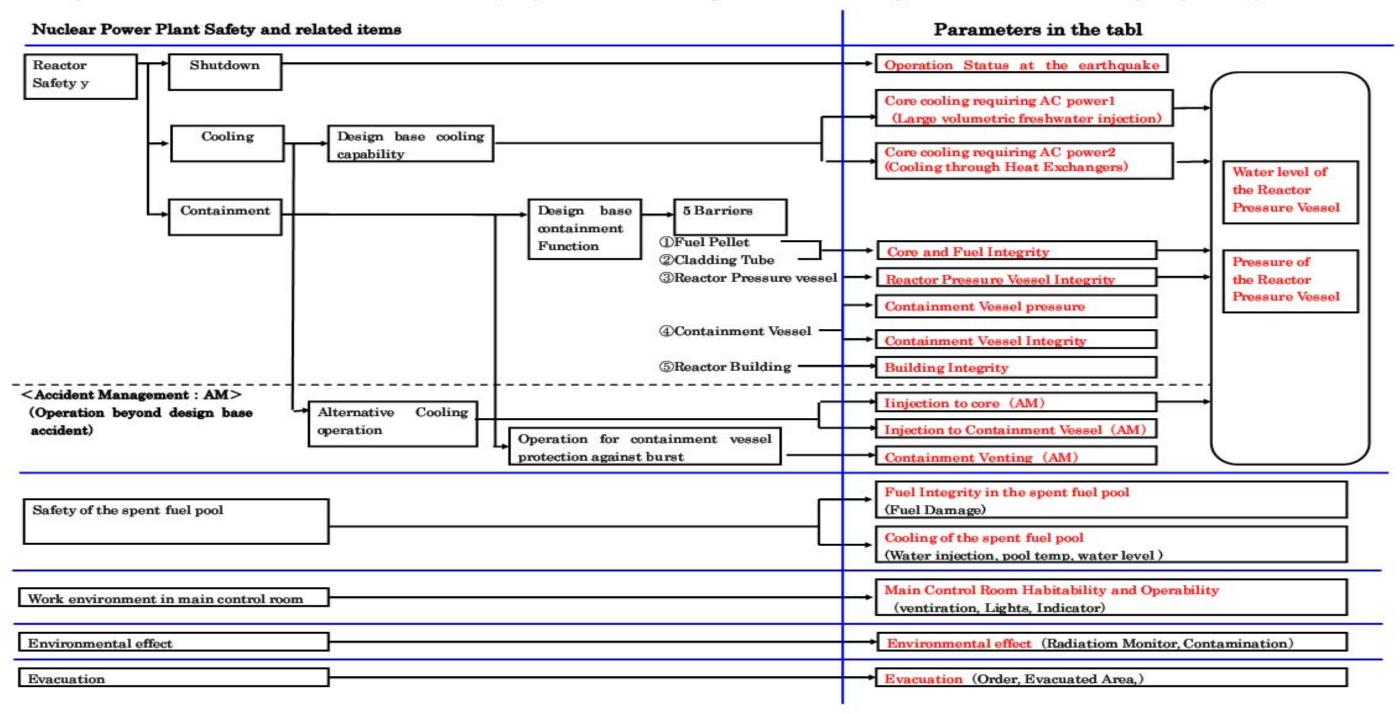

Power Station	Fukushima Dai-ni Nuclear Power Station				
Unit	1	2	3	4	
Electric / Thermal Power output (MW)	1100 / 3293				
Type of Reactor	BWR-5	BWR-5	BWR-5	BWR-5	
Operation Status at the earthquake occurred	In Service → Automatic Shutdown				
Status	All the units are in cold shutdown.				
INES (estimated by NISA)	Level 3	Level 3	_	Level 3	
Remarks	Unit-1, 2, 3 & 4, which were in full operation when the earthquake occurred, all shutdown automatically. External power supply was available after the quake. While injecting water into the reactor pressure vessel using make-up water system, TEPCO recovered the core cooling function and made the unit into cold shutdown state one by one.  No parameter has shown abnormality after the earthquake occurred off an shore of Miyagi prefecture at 23:32, Apr. 7th.  Latest Monitor Indication: 1.6 µ Sv/h at 9:00, May 12th at NPS border  Evacuation Area: 3km from NPS(3/12 7:45), 10km from NPS(3/12 17:39), 8km from NPS(4/21)				

Power Station	Onagawa Nuclear Power Station			
Unit	1	2	3	
Operation Status at the earthquake occurred	In Service → Automatic Shutdown			
Status	All the units are in cold shutdown.			
Remarks	3 out of 4 external power lines in service with another line under construction broke down after an earthquake occurred off the shore of Miyagi prefecture at 23:32, Apr. 7th. All 5 external power lines have become available by Apr. 10th. Monitoring posts' readings have shown no abnormality. All SFP cooling systems had been restored after shutting down due to the earthquake.			

Power Station	Tokai Dai-ni			
Operation Status at the earthquake occurred	In Service -> Automatic Shutdown			
Status	In cold shutdown.			
Remarks	No abnormality has been found after an earthquake occurred off the shore of Miyagi prefecture at 23:32, Apr. 7th.			

### Parameters in the Table

JAIF picks up these parameters to evaluate safety condition of the nuclear plants during this accident from the view point of the principles of nuclear power plant safety, which are "Shutdown", "Cooling" and "Containment". Then we create the chart. The following diagram is to show the correspondence relation of these parameters in the table to nuclear power plant safety.

# **Accidents of Fukushima Daiichi Nuclear Power Stations**

as of 17:00, May 11th

# 1. Latest Major event and response

May 9th

04:17 The Access doors of Unit 1 R/B were opened.

09:00-16:00 Operation to remove rubble by remotely controlled heavy machines conducted today.

12:14-15:00 Operation of injecting water to the Unit 3 SFP was conducted

16:05-19:05 Operation of spraying water to the Unit 4 SFP was conducted

13:09-14:45 Operation of injecting water to the Unit 3 SFP was conducted

Brief home visit of evacuees has been started:

54 households, 92 people, have done on May 10th. More visits are planned for 50 households on May 12th and are being scheduled for 120 households. Visits of the rest are planned in the end of May.

12:30 Water flow into a pit for the Unit 3 water intake power cables was found. Sampling of the water was conducted.

#### (2) Fukushima Dai-ni NPPs

All units are cold shutdown (Unit-1, 2, 4 have been recovered from a event falling under Article 15\*)

#### 3. State of Emergency Declaration

11th 19:03 State of nuclear emergency was declared (Fukushima Dai-ni NPS)

12th 07:45 State of nuclear emergency was declared (Fukushima Dai-ichi NPS)

#### 4. Evacuation Order

11th 21:23 PM direction: for the residents within 3km radius from Fukushima I to evacuate, within 10km radius from Fukushima I to stay in-house

12th 05:44 PM direction: for the residents within 10km radius from Fukushima I to evacuate

12th 17:39 PM direction: for the residents within 10km radius from Fukushima II to evacuate

12th 18:25 PM direction: for the residents within 20km radius from Fukushima I to evacuate

15th 11:06 PM direction: for the residents within 20-30km radius from Fukushima I to stay in-house

25th Governmental advise: for the residents within 20-30 km radius from Fukushima I to voluntarily evacuate

Abbreviations:

SFP: Spent Fuel Storage Pool

EDG: Emergency Diesel Generator RPV: Reactor Pressure Vessel

R/B: Reactor Building

RHR: Residual Heat Removal system CST: Condensate water Storage Tank

T/B: Turbine Building

Safe (Not affected by the quake)

\*1 Trend data of primary parameters are available at Japan Nuclear Technology Institute's Home Page;

"http://www.gengikyo.jp/english/shokai/special\_4.html".

\*2 Data trend is continuously monitored.
